

DUSTBUSTER

COOL STEAM DUST SUPPRESSION SYSTEM

Simple and Effective Dust Control for Indoor Industrial and Agricultural Environments

LOW COST SOLUTION FOR DUST SUPPRESSION

The basis of the system is an electric steam generator designed to conform with international safety standards, compact, taking up very little space and fully automatic. The problem of electrical consumption has not been overlooked! Each electric heating element is self contained, in other words it is possible to switch on elements simultaneously or, individually, if steam requirements are low.

The steam is distributed around the system by 22mm industrial pipework and is discharged at key dust points by 15mm Diameter spray heads. The steam prevents dust particles from rising and keeps the environment practically dust free. Each spray head has a valve for individual control or maintenance. A water softener is available as an optional extra.
